

CURSO 4

MODULO 1

IBM Watson Studio

How can you turn data into knowledge? IBM has a solution called [IBM Watson Studio](#). It's an integrated development environment (IDE). Named after IBM's founder, it pulls together the most useful development and analytic tools, wrapping them in a development platform that is powerful enough to meet large-scale challenges, yet simple enough that developers can master it quickly.

IBM Watson Studio solves AI development problems. With IBM Watson Studio, businesses can simplify data projects with a streamlined process to extract insights from data to help them get smarter faster. It delivers an easy-to-use, collaborative data science and machine learning environment to build and train models, prepare and analyze data, and share insights all in one place.

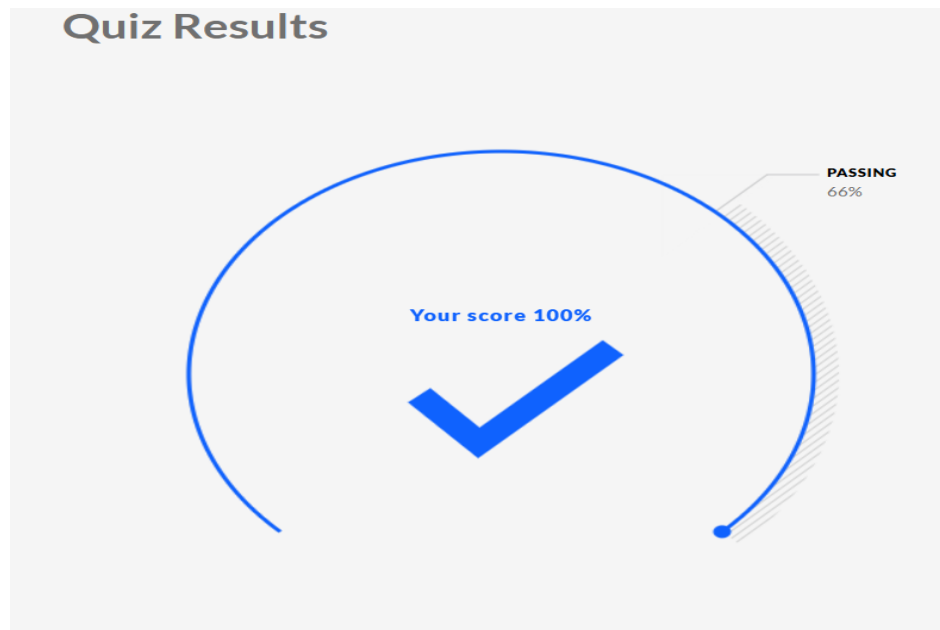

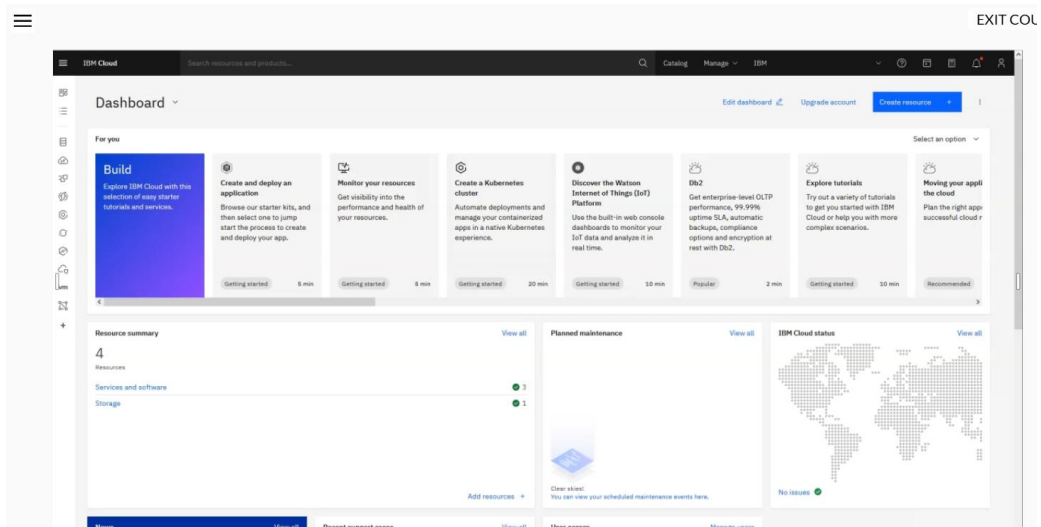

Data refinery tool

IBM Watson Studio offers many tools, including the data refinery tool. It's beneficial because it saves data preparation time. It can quickly transform large amounts of raw data into consumable, high-quality information that's ready for analytics.

With it, data scientists can:

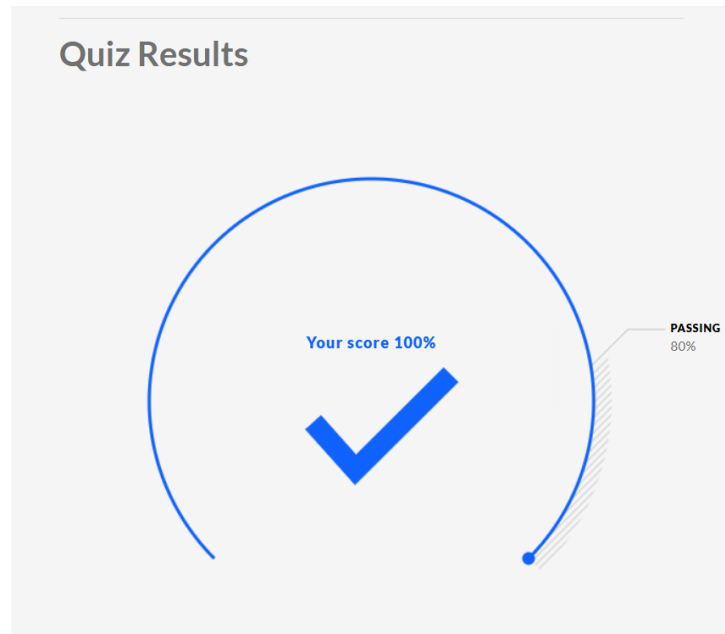

- Create a workflow to clean and shape data
- Understand the quality and distribution of data using dozens of built-in charts, graphs, and statistics
- Schedule data jobs for repeatable outcomes
- Visualize data to discover insights

MODULO 2

MODULO 3

[illegible]

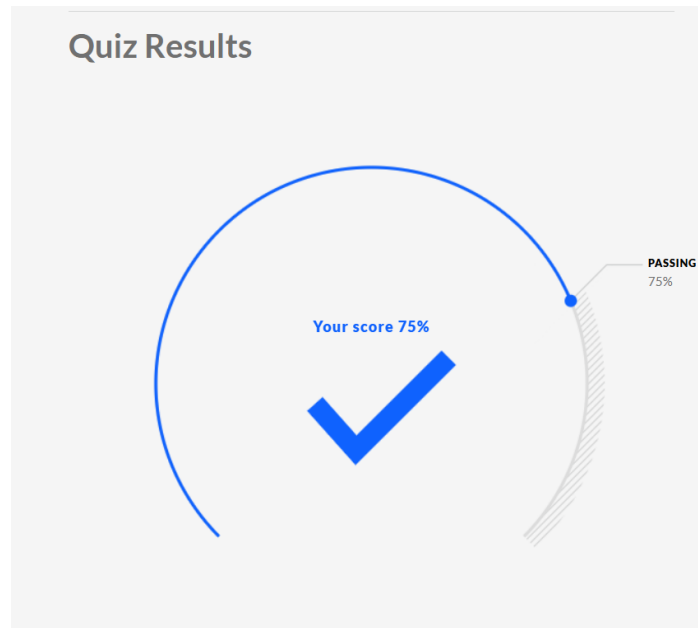

MODULO 4

Well done!

The steps you just completed to add a new column helped you refine your data set to show claims over \$10K. You are in the middle of investigating the business sponsor's **hypothesis** that **auto insurance claims for repairs over \$10K may be fraudulent and help predict fraud**.

Now it's time to get help from an initial visualization to further your research. But first, take a short quiz.

Note: The data refinery tool in IBM Watson Studio is very advanced. You can perform many more operations in this tool and even explore other hypotheses, too. For example, you could investigate this hypothesis: a person driving with an expired driver's license might help predict fraud.

MODULO 5

Conclude insights for your project

Let's reflect on this data science project for your auto insurance company.

- Fraud is a pain point and growing concern because your company has already lost millions of dollars.
- The goal of the project is to predict fraud and suspicious activity to help drastically reduce losses due to fraud.
- You worked in IBM Watson Studio with the data refinery tool to understand, clean, and refine a data set of claims from 975 customers.
- The business sponsor shared a **hypothesis** that **auto insurance claims for repairs over \$10K might be fraudulent and might help predict fraud**.
- And, the following screen capture is the data visualization you created and explored to conclude insights.

1

IBM Watson Studio is an integrated development environment (IDE) that offers the data refinery tool to clean, shape, and visualize data.

2

The goal of your data science project is to predict fraud and suspicious activity to help drastically reduce losses due to fraud. Fraud is a pain point for the auto insurance company.

3

You worked with a data set of fictitious auto insurance claims with 975 rows and 38 columns.

4

You had the opportunity for hands-on practice in simulations of IBM Watson Studio and the data refinery tool to:

- Provision the Watson Studio Service
- Set up a new project
- Import auto insurance claims data
- Clean the data set
- Refine the data set
- Create and study a data visualization to gain insights

Earn a credential!

Reminder: This course is one of several in the Data Fundamentals series. **Complete all of the courses** in the Data Fundamentals learning plan and earn the **Data Fundamentals** digital credential from IBM!

IBM SkillsBuild

EXIT CO

For more information about this credential, visit [Data Fundamentals](#) on Credly.

Confirm that course completion shows as **100%** at the top of the navigation menu. If course completion is not 100%, go to any lesson that does not have a checkmark beside it and select the **I've checked it out!** button. You can then close this window to return to SkillsBuild and explore more learning.

Note: It might take a few hours for course completion to appear on SkillsBuild.
